linkedin [in/zachwillis](https://www.linkedin.com/in/zachwillis)

User Experience/User Interface Design Lead and Front-End Developer with eight years' experience implementing an Objective Based Design approach in alignment with Agile development philosophies. Specialized in advanced CSS implementation and architecture as well as supporting organizational transformation through investigation of current business processes and interrogating client goals to distill clear and concise objectives.

// Professional Experience

Booz Allen Hamilton

UX/UI Lead | Software Engineer

January 2016 – Present

Lead team of designers supporting new feature design and development while setting autonomous objectives, incrementally enhancing the UI. Major achievements include a full UI refresh, conversion of CSS codebase to Sass and developing a continuous 508 workflow. Currently focused on the engineering and development of a design system making contributions in the areas of strategic planning for the visual language, visual design, code development and production of robust documentation set.

2014 – 2016 Knight Point Systems

UX Designer | Business Analyst

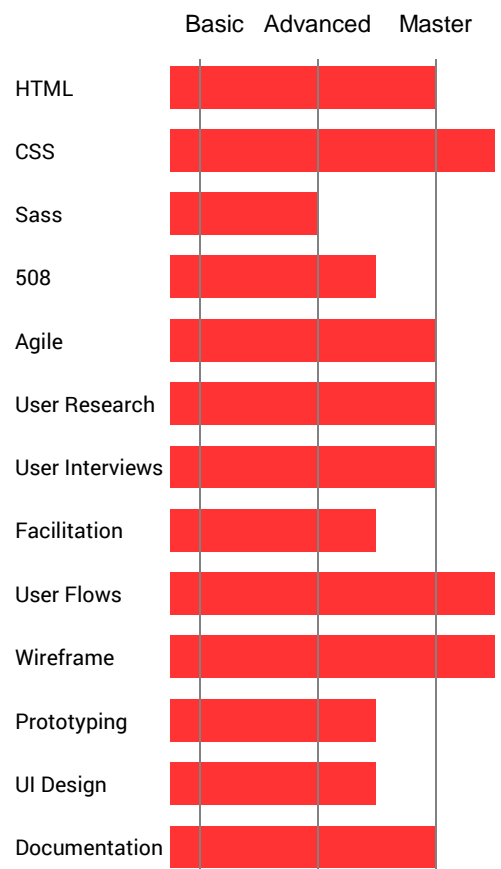

Conducted user interviews developing artifacts that tracked current and future state business processes in the form of process flows and needs analysis break downs. Lead facilitation sessions with Unit Chiefs and ITPM, establishing priorities and vision, road-mapping change management goals/milestones. Worked closely with the Strategic Communication team to evangelize new technologies and ran a myriad of training and knowledge transfer sessions with the general user population, technical teams and leadership.

2008 – 2014 Freeport Technologies

Technical Operations & Logistics Manager

Oversaw the fabrication and provisioning of custom audio/visual systems. Deeply involved in the evolution of a custom enterprise AV control web app, contributing to the areas of UI & UX design. Lead a pilot program with the U.S. Naval Observatory to hone the feature set and UI design which later grew to encompass public and private industry clients. Created visual design assets to develop a common language for the company's product and service lineup for web and print.
